ABOUT ME

I'm an AI Engineer specialized in enterprise AI integration. I started studying Philosophy in Argentina, then moved to Germany to study Physics at Freie Universität Berlin. Due to COVID and career perspectives, I transitioned to IT, graduating in Software Development in 2025. Currently, I work at Remerge GmbH, Berlin, building practical, scalable AI solutions: from Slack bots to multi-bot platforms integrating enterprise databases with LLMs and RAG. Passionate about natural language processing, I aim to create intuitive, useful systems, share knowledge via internal talks, and contribute to the developer community. Currently learning Japanese while expanding my technical expertise in AI. Future goal: Lead enterprise AI integration, develop solutions that democratize access to advanced AI technologies, and bring tangible value to everyday workflows.

WORK EXPERIENCE

AI Integrator - Remerge GmbH

2024 - Present

- Developed Slack AI bots to automate internal reports and legal documentation queries by integrating OpenAI APIs with enterprise databases (Druid, PostgreSQL).
- Implemented RAG (Retrieval-Augmented Generation) systems using OpenAI Assistants API and Vector Stores to create AI assistants that respond to internal Confluence documentation.
- Built custom Dify plugins enabling BigQuery integration for real-time advertising campaign performance reports.
- Designed modular architecture for multiple AI bots (AI Bot Hub) to centralize management of specialized assistants (Legal, AdOps) with threading and orchestration.
- Translated natural language queries into SQL using prompt engineering, enabling non-technical users to access analytical campaign data.
- Implemented CI/CD pipelines with Nomad and Terraform for automated deployment of AI solutions on cloud infrastructure.
- Led AI educational initiatives, including "AI Coding Live" (weekly Cursor AI sessions for developers) and "AI for Starters" (no-code tools for non-technical teams).
- Delivered internal technical presentations on workflow automation with Zapier and practical implementation of Vector Stores with self-hosted and frontier models.
- Integrated logging and monitoring systems in Google Cloud SQL to track AI conversations and analyze bot performance in production.

Teacher - Joan Miro Primary School

2021 - 2022

- Assisted in teaching and supporting classroom activities as a Teaching Assistant.
- Managed and coordinated staff and children, ensuring smooth daily operations.
- Served as a Programming Tutor in the AG "Scratch" extracurricular program, guiding students in coding fundamentals.

EDUCATION

IHK Berlin

2025

Computer Science Expert

Freie Universität Berlin

2021

Physics Studies

Universidad Nacional de Rosario - UNR

2016

Master's Level Degree in Philosophy

Universidad Nacional de Rosario - UNR

2015

Teaching Degree in Philosophy

Nuestra Señora de la Guardia

2009

High School Diploma

CERTIFICATIONS

Getting Started with Terraform for Google Cloud • Google Cloud	2025
Software Architecture & Design of Modern Large Scale Systems • Udemy	2025
Mathematics for Machine Learning • Imperial College London	2025
DALF C1 (Diplôme Approfondi de Langue Française) • DALF C1 (Diplôme Approfondi de Langue Française)	2025
Mathematics for Machine Learning and Data Science • DeepLearning.AI	2025
IBM AI Engineering • IBM	2025
PLIDA C1 (Progetto Lingua Italiana Dante Alighieri) • Società Dante Alighieri	2024
IBM AI Developer • IBM	2024
Certificate in Advance English C1 • Cambridge English Assessment	2021
TestDaF (Test Deutsch als Fremdsprache) C1 • TestDaF Institute (Gesellschaft für Akademische Studienvorbereitung und Testentwicklung)	2017

SKILLS AND LANGUAGES

- **Technical skills:** Word, Excel, Power Point, Google Docs, Google Sheets, Google Slides, Python, JavaScript, Java, C, C#, PHP, HTML5, CSS, VSCode, Cursor AI, Jupyter-Notebooks, REST-API development, OpenAI-API, Anthropic-API, Slack-API, Confluence-API, Jira API, FastAPI/Flask, Postman, Spring Boot, Hibernate, BigQuery, PostgreSQL, Druid, Google-Cloud-Storage, TensorFlow, PyTorch, Keras, Scikit-learn, Pandas, NumPy, BeautifulSoup, Ollama, Hugging Face, Vector Databases, LangChain, Linux, Virtualisation, GitHub, GitHub Actions (CI/CD Pipelines), Docker, Terraform, Nomad, OAuth, SSH, CLI, Dify, Zapier, n8n.
- **Languages:** German Advanced. English Advanced. Italian Advanced. French Advanced. Basic Japanese.
